

Week 6 Sprint Recap

Important items to note

- Company profile information is added and managed by ICN Victoria (the client) and not the company in question. Companies cannot create a profile nor edit an existing profile. Feedback regarding data goes back to ICN Victoria to update, not the company.
- The basic product usage needs to be free. Other subscription-based tiers (3 max) can be added on top of the basic product usage.
- The user of the product is anticipated to be individuals from relevant industry, government project owners, and the general public.
- A single company can potentially contain multiple capabilities (i.e., be capable of manufacturing, supplying, and servicing a unique item). Thus, it would not be accurate to limit the capabilities of companies to a single colour, icon, or any other distinguisher. We encourage the creative design of colours and icons to denote capability types as long as they are attached to a single item.
- Sharing and exporting features as a part of data editing is preferable, and so too is the option for multiple export types.
- Do not leave any security features until the end – have a plan early on as this is priority for enterprise products.
- Onboarding questions during the sign-up process are preferable. However, be sure to not make the onboarding process too long.
- Any comms features (enquiry/feedback/reach-out, etc) should enable the user to contact ICN Victoria and not any company. It will connect to ICN Victoria's Customer Services team. This feature is a nice to have but not necessary.
- Feel free to share architecture flow diagrams or documentation to the team at ICN Victoria via your shared folders.
- Be sure to include the product name ('Navigator by ICN Victoria'/'ICN Victoria Navigator') clearly somewhere on the product.
- It would be great to keep a track of the amount of investment required for product deployment and ongoing hosting (licencing fees). Feel free to propose different scenarios driven by potential number of users and the business scalability.
- We do not mind a Google or Facebook account sign in option.
