

Hi Team Zamjo,

Lovely presentation on Thursday. Great work from all of you! I had a chat with Roy on Friday about the handover process and how we'll proceed after the semester concludes.

Here is the Basic Procedure

Each team will conduct their handover with Roy individually. But I'll book Roy's time on your behalf, and a meeting link (likely through Microsoft Teams) will be sent to you once confirmed.

Your team should decide on a few possible time slots over the next couple of weeks that work for most members, then fill in your team availability using this timeful link I created: <https://timeful.app/e/f7c6F>

(Please leave your team number & name).

I'll confirm the meeting details with you before it's scheduled, and if the time works out, I'll join your guys as well.

Here is What Will Happen in the Handover

The handover meeting will take around 30 minutes. Since Roy has already seen your product throughout the semester, a really long demo won't be necessary unless he specifically requests to show some features.

You should ensure that:

- The application is publicly accessible (e.g. provide the deployed link for the webapp and whatever method you can get it on Roy's phone).
- All credentials and the highest access privileges of the product are shared.
- It would be nice if we include a user manual or a short usage tutorial video (this will also be required for your assessment anyway).
- And lastly, pointing Roy to the handover document prepared for the future developers.

What to Prepare Before the Handover

As we discussed earlier, the handover should cover two aspects — one for the product's users/clients, and one for potential future development teams. For the second aspect, if your documentation throughout the semester (design, development, deployment, etc.) has been thorough and complete, this step shouldn't be too hard, it's mainly involve linking and organising those artefacts into a clear, concise, and logical structure.

As you can tell, this means, ideally, all documentation and artefacts should be finalised before the handover. (And finally the last time you will have to touch them !!!). Afterward, export your entire Confluence space as a large PDF which includes detailed table of content and a dedicated section for handover materials, then upload it to the shared folder that ICN Victoria will be using to access them.

Shared folder link: [Team03 - Zamjo](#)

Roy will review these materials with you during the meeting.

Some Additional Stuff

Roy has informed me that ICN is seriously considering taking the product to commercialisation, although it will require some revamping before it's production-ready.

Excitingly (and lucky you), there may be opportunities for a few **paid internships** (possibly one or two positions, depending on the outcomes and budget).

Once all teams have completed their handovers, Roy will present the results to the board leadership of ICN Victoria on the week following (so please make sure your app is deployed and working smoothly).

After that, if any luck, I'll let you know! :)

I want to say Thank you, team and everyone. It has been a great experience spending time with you guys this semester. I'm genuinely proud of what you've achieved, and you've done a fantastic job! Looking forward to always keep in touch, and don't hesitate to message me if you got anything you want to discuss.

Best,
Harry
